QA Lead | Automation-Focused QA Engineer

Professional Summary:

QA Lead with 7+ years of experience supporting web, mobile, and enterprise systems across healthcare, government licensing, mortgage, and financial workflows. Strong background in test strategy, regression planning, SQL-based backend validation, API validation, release readiness, and mentoring QA analysts. Building modern QA automation and SDET skills through hands-on projects involving REST APIs, C#, .NET, xUnit, Playwright, Docker, CI/CD, and PostgreSQL.

Technical Skills:

- **Languages & Frameworks:** C#, JavaScript, TypeScript, SQL, .NET, React
- **Testing & Automation:** API Testing, REST API Validation, Playwright, xUnit, FluentAssertions, Integration Testing, Regression Testing, Cross-Browser Testing, Mobile Testing
- **Tools & Platforms:** Azure DevOps, Jira, BrowserStack, Docker, Git, GitHub, GitHub Actions
- **Quality & Testing Practices:** Test Strategy, Release Validation, Backend Data Verification, Test Planning, Defect Tracking, Acceptance Criteria Reviews
- **Methodologies:** Agile/Scrum, BDD/Gherkin

Projects:

TaskTracker - Full-Stack QA Automation Project

Tech: C#, .NET Minimal API, EF Core, PostgreSQL, React, Vite, Tailwind CSS, xUnit, FluentAssertions, WebApplicationFactory, Playwright, Docker Compose, GitHub Actions

- Built a full-stack task management application with a .NET Minimal API, React/Vite frontend, and PostgreSQL database to practice realistic SDET workflows.
- Created layered automated test coverage across domain unit tests, API integration tests, and Playwright end-to-end tests.
- Used xUnit, FluentAssertions, and WebApplicationFactory to validate business rules, HTTP responses, status codes, and API error scenarios.
- Configured Docker Compose and GitHub Actions to support repeatable local environments and automated CI test execution.

Personal Website & Home Lab Infrastructure

Tech: Nginx, Docker, Raspberry Pi, Cloudflare, Linux, Networking

- Built and self-hosted a personal portfolio website to showcase QA leadership experience, automation projects, and technical growth.
- Deployed the site using Docker, Nginx, Raspberry Pi, and Cloudflare-managed DNS to practice real-world hosting, networking, and infrastructure workflow.

Professional Experience:

System Analyst Senior / QA Lead– BayCare Health Systems

Nov 2022 – Current

- Led QA strategy and release quality across three concurrent initiatives, overseeing a team of four QA analysts and ensuring consistent delivery across web and mobile platforms.
- Designed and scaled a modular QA framework, initially supporting a 50k+ user mobile application and later adopted as an organizational standard.
- Developed EMEU automation scripts to register test patients and create patient data in PowerChart and Revenue Cycle, reducing repetitive manual setup for healthcare testing workflows.
- Established structured regression and release validation processes, including BrowserStack-based mobile device testing, improving test coverage and reducing late-stage defects.

- Collaborated with product and engineering teams to shift QA earlier in the SDLC, refining acceptance criteria, clarifying risk, and reducing rework.

QA Test Analyst – *Brandt Information Services*

Jul 2022 – Nov 2022

- Served as sole QA for a statewide licensing platform across web, mobile, and POS systems, supporting release quality during high-traffic seasonal usage.
- Owned end-to-end test strategy, coverage planning, regression scope, and release readiness criteria across multiple application workflows.
- Validated complex business rules for licensing eligibility, fees, renewals, customer accounts, and jurisdiction-specific requirements.
- Performed SQL-based backend validation to verify transactional integrity across licensing, payment, and fulfillment workflows.
- Executed cross-browser and cross-device testing with BrowserStack to ensure consistent functionality across supported environments.

QA Test Analyst – *Nationwide Title Clearing Inc*

Jan 2019 – Jul 2022

- Tested high-risk mortgage processing systems across all 50 U.S. states, validating workflows against state-specific legal, regulatory, and business requirements.
- Validated end-to-end financial workflows including data intake, document generation, e-signing, e-recording, order processing, and lifecycle state changes.
- Used SQL for backend validation and test data setup, verifying database updates, order transitions, edge cases, and data integrity across complex workflows.
- Built and maintained regression test coverage for SaaS and Oracle Forms applications, improving release confidence in an Agile delivery environment.
- Participated in Change Advisory Board reviews by evaluating deployment risk, defect impact, and release readiness for production changes.

Education:

St. Petersburg College

- BAS: Technology Development and Management: Software Assurance

Pasco-Hernando State College

- AS: Computer Programming and Analysis

Certifications & Training:

- ISTQB Certified Tester – Foundation Level
- Microsoft Azure Fundamentals
- Foundational C# with Microsoft
- Meta React Specializations
